1. Tell us the differences between uncontrolled and controlled components?

Ans: In React, controlled components refer to components that have their state and behavior controlled by the parent component. These components rely on props passed down from the parent component to update their state and behavior. Uncontrolled components refer to components that manage their own state internally.

2. How

Ans: propT
the correct
specify vali

3. Tell us the difference between nodejs and express js?

Ans: NodeJS is the package, which provides the JavaScript run-time environment, whereas Express is a framework that sits on top of NodeJS and helps us to handle requests and responses.
